

Forma Lighting to demonstrate MotoZERO66 ZOOM at LEDucation.

MotoZERO66 is an expansion on the award-winning series of Motorized Track Mounted Architectural Lighting and features a NEW Remote Beam Angle adjustment.

The **MotoZERO 66 Zoom** is one of the most versatile and feature rich offerings of the MOTOLUX Series by Forma Lighting. The small and versatile track fixture is available with a state-of-the-art zoom optic which enables you to focus on a wide to narrow spot at the touch of a button. The pan and tilt movements of the fixture, as well the beam angle and intensity of the light, can be fully controlled by Forma Lighting's Bluetooth application powered by CASAMBI™.

The **MotoZERO 66 Zoom** is a compact and versatile spotlight of Italian design that provides an ideal solution for dynamic environments and many architectural spaces where lighting needs to be changed frequently or is inaccessible without special scaffolding or lifts. The track mounted fixture features a cast aluminum light head and driver box designed for passive cooling with an inclusive gel lens that provides the dynamic shaping zoom optic. The seamless die-cast aluminum track mounted spotlight is designed to remotely or manually adjust to aiming angles of 350° pan and +/- 90° tilt. All of the **MotoZERO** range of track fixtures can pan and tilt, dim, dim to warm and change kelvin temperature on command.

The **MotoZERO66 ZOOM** comes standard with Citizens® built-in LED Modules in 14W and up to 1200 lumens in a choice of color temperatures or dim to warm. Control options include a hand-held remote transmitter, Casambi Bluetooth app to wirelessly control from a phone or tablet and program scene changes, as well as the options for DALI & DMX controls upon request. The series will mount on universal tracks such as Halo™, Juno™, Lightolier™ and Global™ tracks or are available with the STUCCHI ONETRACK® system. Field interchangeable optical accessories are available to create additional lighting effects and optimize visual comfort in those more complex applications.
