

Press Release

11th March 2019

## LED Linear Technologies at LEDucation

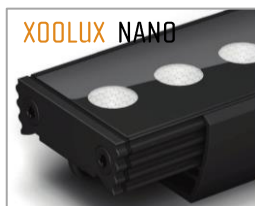

New York, USA: LED Linear USA, Inc. presents its unique Technologies at LEDucation 2019 in New York.

You are invited to experience the brand new technologies and products at LEDucation on March 12-13, at Hilton Midtown NYC. You can find LED Linear booth in the Grand Ballroom at Booth 719 and 721.

### Technologies at a Glance:

**Nano Ray** LED Linear™ developed the new **NanoRay technology** to enable the design of complex optical systems with minimal dimensions. Coupled with our new Chip Scale Package (CSP) LEDs, these nanoscale lenses provide an accurate beam control, minimal color over angle, superior light quality of 95 CRI and no direct view of the LEDs. **NanoRay** made the design of three powerful, sharp and elegant luminaires possible.

True  
Color

**TrueColor technology** provides an optimal rendition of the LEDs thanks to our proprietary manufacturing process. Therefore, LED Linear™ upgraded three robust IP67 outdoor fixtures that now exhibit minimal color shift from the LEDs original spectrum. This provides absolute homogeneity and consistency for lighting installations using other luminaires as well as the **TrueColor** range.

---

#### **About LED Linear USA Inc.**

Headquartered in Niagara Falls, New York, LED Linear USA Inc. supplies high quality linear LED lighting solutions for a variety of applications based on flexible, reel to reel produced circuit boards.

We offer a uniquely manufactured series of product families for interior and exterior lighting solutions. These products stand as proof of our strict manufacturing quality and allow our clients to economically realize their design goals across all application types.

We invite you to familiarize yourself with our innovative and unique product portfolio and to contact us for solutions based on in-depth LED knowledge and a passion for what we do.
