STORM SYSTEM®

- meeting every esthetes need

STORM SYSTEM® from the danish design company ONE A is a complete and multi-functional system with elegant light- and smart home products, that aim to create the finest minimalistic surfaces within architecture

The STORM SYSTEM® meets every esthetes need for a lighting- and smart-home technology solution that compliments minimalistic interiors.

Through a thorough design and refine process ONE A has created the pioneering concept STORM SYSTEM®:

The secret lies in the one-size mounting unit, in which the entire product range fits. The unit mounts completely flush with ceilings or walls in any building structure. The sophisticated lights and smart technology products – such as speakers, cameras, smoke alarms, ventilations and more – are fixed by using a "snap lock" technology.

By focusing on handcrafted details and using only exclusive materials, such as aluminium, brass, bronze, wood, concrete, glass, alabaster and leather, ONE A manufactures a collection of products, that adds an aesthetic quality to the interior.

The simplicity and flexibility of STORM SYSTEM® combined with the extremely high manufacturing standards creates the perfect merge of minimalist design and smart technology, to bring visual harmony to residential or commercial buildings.

The danish design company ONE A is pioneers of STORM SYSTEM®. Available in two sizes – Medium and Small.

About ONE A

The Danish design company ONE A innovates and produces architectural lighting and smart-technology products with a minimalistic expression to create visual harmony in any living environment.

The story begins in the architectural lighting company Bjarnhoff A/S – founded by Jan Bjarnhoff in 1998. Throughout the years of providing exclusive lighting solutions in various unique private homes and public institutions, Jan and his team found a need for smart-home technology products that could complement the lighting solutions without compromising the overall minimalistic expression.

Realizing there was an inconsistency the desire arose to design a solution embracing both light and smart-home technology in a uniform system. Thus, in 2008 ONE A was born. Soon after the company became known as the pioneers of STORM SYSTEM® – a uniform solution for lighting and technical products.

Since then, ONE A has expanded into a global player with sales in 40 countries, while becoming the preferred solution for many award-winning architects, designers, and engineers. Today the product palette has expanded to include several stand alone products – All still following a minimalistic design philosophy and the mindset never to consider compromise as an alternative.

Presenting

12HRS & 24HRS

- Obtain the famous danish "Hygge"

12HRS and 24HRS from the Danish design company ONE A are stylish portable battery lamps for the quality-conscious customer and will enrich any area with the feeling of "hygge"

A soft light shines through the alabaster stone, creating the same atmosphere as a burning candle, without the risk of fire or the candle burning out. The wireless lamps are provided with a dimmer button – hidden discretely underneath the base. There, you will also find a small indicator that shows the charge level. The minimalistic base is made of anodized aluminium and is available in gold, silver, bronze and black.

When fully charged the lamps provide light for at least 24 hours, respectively 12 hours. When charging, the lamp is placed in a cube of smoked oak with a sophisticatedly integrated charger. Multiple charger-cubes can be placed in a special designed panel of smoked oak, ensuring the lamps to be beautifully displayed – even when idle.

12Hrs + 24Hrs are standalone products within the design family STORM SYSTEM® by ONE A: a range of light- and smart home products for walls and ceilings. STORM SYSTEM® is known for its perfect proportions, elegance, extremely high manufacturing and handcrafted details – without compromise.

ONE A

Presenting
JB ONE

Turn the light on, place your phone on the smooth leather surface and enjoy the beautiful finish of the new JB ONE lamp by ONE A.

JB ONE came to life the same way as every ONE A product did, namely through a desire to fulfill a specific need, yet kept within the ONE A aesthetics and sophisticated design philosophy.

While being a beautiful sculpture in itself, the JB ONE is a multifunctional lamp. When lit, it creates a cozy atmosphere providing a pleasant light for reading. Meanwhile it has an integrated phone charger, encased in a base milled to precision from a solid piece of aluminium and is available in gold, silver, bronze and black.

XT Table is a standalone product within the same design family as STORM SYSTEM® – a range of light- and smart home products for walls and ceilings. Known for its perfect proportions, elegance, extremely high manufacturing and handcrafted details – without compromise.
