

Designers Lighting Forum

Sustainable Lighting: From Theory to Impact

Alexandra Christiana | HMFH Architects Kate Hickcox | Pacific Northwest National Laboratory Scott Roos | Acuity Brands Leela Shanker | WAP Sustainability Consulting

March 18, 2025

Credit(s) earned on completion of this course will be reported to AIA CES for AIA members. Certificates of Completion for both AIA members and non-AIA members are available upon request.

This course is registered with AIA CES for continuing professional education. As such, it does not include content that may be deemed or construed to be an approval or endorsement by the AIA of any material of construction or any method or manner of handling, using, distributing, or dealing in any material or product.

Questions related to specific materials, methods, and services will be addressed at the conclusion of this presentation.

Learning Objectives

At the end of this course, participants will be able to:

1. Gain a deeper understanding of the relative environmental impacts from the materials, design, manufacturing, use and end-of-life treatment of luminaires...and how our ability to reduce them will most likely evolve.

2. Understand the nuances behind material transparency labeling and life cycle assessments, what they tell us about how to truly minimize the environmental impact of the luminaires we design, manufacture & specify and the challenges to scaling these in a meaningful way.

3. Understand the benefits and limitations of simpler sustainability metrics (e.g., TM65 embodied carbon calculations and TM66 Circular Economy assessments) vs. more comprehensive Life Cycle Assessments/EPDs.

4. Be able to immediately apply learnings to your practice to reduce the impact of the luminaires you design, specify and apply and how to best advocate for positive industry change going forward.

Key Sustainability Considerations Lifecycle Carbon & Other Emissions

Net Zero Operational Carbon

Definition

TIT

A net zero carbon building is highly energy efficient with all remaining energy from onsite and/or offsite renewable sources

Guiding Principles

- Measure and disclose carbon Carbon is the ultimate metric to track, and buildings must achieve an annual operational net zero carbon emissions balance based on metered data
- Reduce energy demand Prioritise energy efficiency to ensure that buildings are performing as efficiently as possible, and not wasting energy
- Generate balance from renewables Supply remaining demand from renewable energy sources, preferably on-site followed by off-site, or from offsets
- Improve verification and rigour Over time, progress to include embodied carbon and other impact areas such as zero water and zero waste

Whole Life Carbon Vision

2050

New buildings, infrastructure and renovations will have **net** zero embodied carbon, and all buildings, including existing buildings, must be **net zero** operational carbon.

2030

New buildings, infrastructure and renovations will have at least 40% less embodied carbon with significant upfront carbon reduction, and all new buildings must be net zero operational carbon.

> vet Zero Embodied Carbon

TTT

Net Zero Embodied Carbon

Definition

A net zero embodied carbon building (new or renovated) or infrastructure asset is highly resource efficient with upfront carbon minimised to the greatest extent possible and all remaining embodied carbon reduced or, as a last resort, offset in order to achieve net zero across the lifecycle.

Guiding Principles

1. Prevent

Avoid embodied carbon from the outset by considering alternative strategies to deliver the desired function

2. Reduce and optimise

Evaluate each design choice in terms of the upfront carbon reductions and as part of a whole lifecycle approach

- 3. Plan for the future Take steps to avoid future embodied carbon during and at end of life
- 4. Offset

As a last resort, offset residual embodied carbon emissions within the project or organisational boundary where possible or if necessary through verified offset schemes

Net Zero Opertational Carbon

Net Zero Carbon

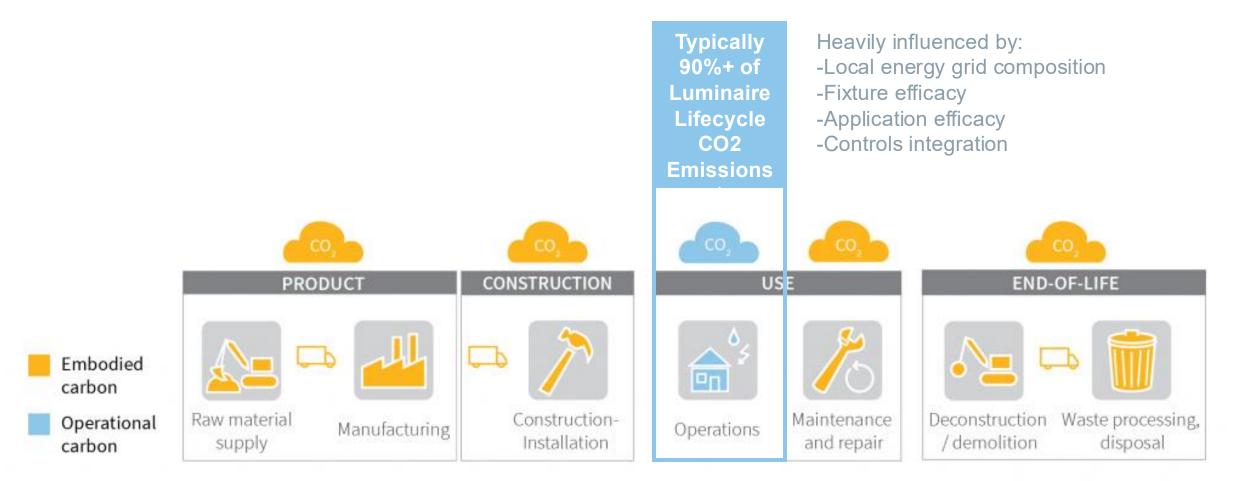

Buildings Commitment

All buildings within direct

control to operate at net

zero carbon by 2030

CO2 Emissions = Embodied + Operational Carbon

Aspirational Lighting Industry Circular Economy

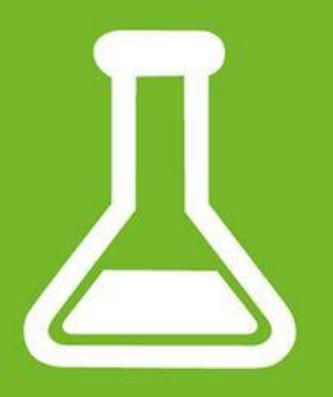

2020 IALD Position Paper with Recommendations

September 2020		
	INTERNATIONAL ASSOCIATION OF LIGHTING DESIGNERS	

"Truly embracing the circular economy philosophy requires significant change to existing practices across the lighting and building industries"

- Replaceability of LEDs & control gear while addressing long term compatibility issues through regulation
- A standard to ensure compatibility of retrofit lamps
- Products designed to last longer and be more easily repaired, refurbished, reused & recycled
 - To include new assessment tools i.e., electronic product passports, repairability index or sustainability score
 - Greater material transparency from manufactures
- Development of a secondary market for used luminaires including tax incentives
- Encourage new business models such as LaaS
 - Call for an effective way to regulate product as a service contracts to ensure they are fully coherent with the circular economy principles

Material Health

Materials Health Impacts on People and the Environment

Why is this so important?

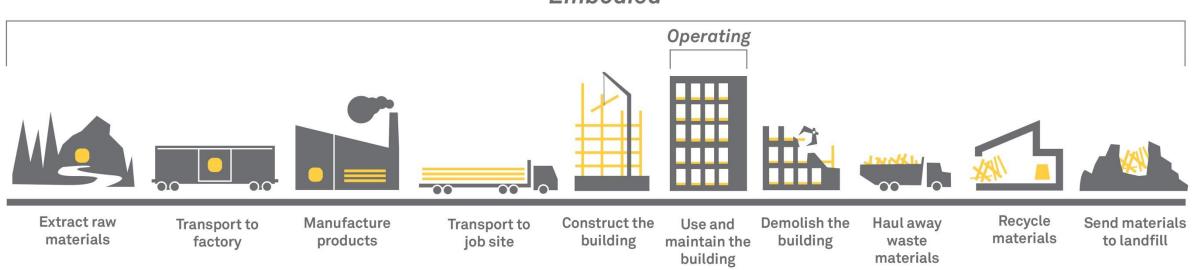

People spend the vast majority of their time indoors.

86.7%

Life Cycle Assessments (LCAs) & Environmental Product Declarations (EPDs)

Life Cycle Assessment

Key to informed & sustainable decision-making

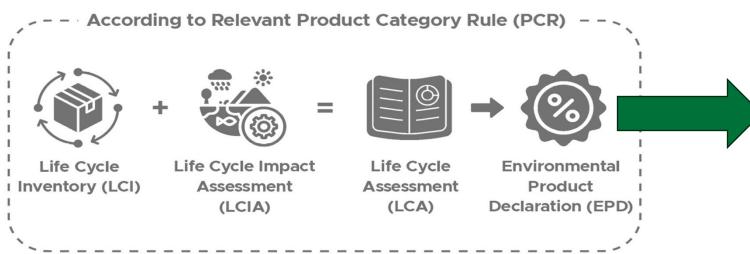

LCA is an environmental accounting methodology that measures the potential environmental impacts of a product across various stages of its lifecycle.

ATMOSPHERE			W	ATER	EARTH		
	0				E	A	
Global Warming Potential refers to long-term changes in global weather patterns that are caused by increased concentrations of greenhouse gases in the atmosphere.	Ozone Depletion Potential is the destruction of the stratospheric ozone layer, which shields the earth from ultraviolet radiation that's harmful to life, caused by human-made air pollution.	Photochemical Ozone Creation Potential happens when sunlight reacts with hydrocarbons, nitrogen oxides, and volatile organic compounds, to produce air pollution known as smog.	Acidification Potential is the result of human- made emissions and refers to the decrease in pH and increase in acidity of oceans, lakes, rivers, and streams – polluting groundwater and harming aquatic life.	Eutrophication Potential occurs when excessive nutrients cause increased algae growth in lakes, blocking the underwater penetration of sunlight needed to produce oxygen and resulting in the loss of aquatic life.	Depletion of Abiotic Resources (Elements) refers to the reduction of available non- renewable resources, such as metals, that are found on the periodic table of elements, due to human activity.	Depletion of Abiotic Resources (Fossil Fuels) refers to the decreasing availability of non- renewable carbon- based compounds, suc as oil and coal, due to human activity.	
10.39 kg CO ₂ -Equiv.	2.66E-07 kg CFC 11-Equiv.	1.46E+00 kg O₃ -Equiv.	6.30E-02 kg SO ₂ -Equiv.	2.13E-02 kg N-Equiv.	- kg Sb-Equiv.	– MJ	

<u>Includes</u> use phase energy consumption *Typically, 85%+ of a luminaire's lifecycle emissions*

LCA Process

- Complex, time consuming & costly
- Provides manufacturer deep insights on potential areas of improvement
- Generally, not comparable between like products due to differing data sources, assumptions, modeling, etc.

Product Carbon Footprint (PCF) & Embodied Carbon Calculation Methodology (TM65)

Product Carbon Footprint

Governed by ISO14067

CARBON TRUST TRUST For the YYYY carbon footprint of this product has been verified in accordance with ISO 14067. Learn more at clientwebsite.com carbontrust.com/label

Same basic process as for an LCA, but only reports out carbon emissions and **excludes** Use Stage

	Impacts	Acronym	Unit of Measure
300	Global Warming Potential	GWP	kg CO ₂ -eq
	Acidification Potential	AP	kg SO ₂ -eq
F.F	Eutrophication Potential	EP	kg N-eq
-	Smog Formation Potential	SPF	kg O ₃ -eq
	Ozone Depletion Potential	ODP	kg CFC11-eq
	Blue Water Consumption	BWC	kg
No.	and others!		

TM65 Embodied Carbon Calculation Methodology

Basic calculation method created by CIBSE

Not Included:

- Construction/installation
- Replacement/refurbishment
- Use stage energy/water consumption

Note: Repair & Refrigerant Leakage impacts generally not material/relevant for luminaires

TM65-Tool-BEAMA-webinar-Carl-Collins

Circular Economy Assessment (TM66) & Product Circularity Data Sheets

TM66 Circular Economy Digital Assessment Tool

Created by UK Chartered Institute of Building Service Engineers in cooperation with the Society of Light & Lighting

- Assesses circularity attainment specific to luminaires in 4 categories:
 - Product Design
 - Manufacturing
 - Materials
 - Ecosystem
- Manufacturer "Make" survey: 78 attributes
- Specifier "Specify" survey: 26 attributes
 - when "Make" assessment not available
- Survey answers based on "supporting evidence"
 - Third-party verification available in UK

Category	Points Scored	Maximum possible points	Assessment
Product design	21.0	35.0	2.4
Manufacturing	10.9	11.0	3.9
Materials	5.0	16.0	1.3
Ecosystem	15.0	22.0	2.7

How to analyse the score					
0 to 0.5	Very poor circular economy performance				
0.5 to 1.5	Some circular economy functionality				
1.5 to 2.5	Definite/substantial progress to circularity				
2.5 to 4.0	Excellent circularity				

This digital tool is designed to be used in conjunction with CIBSE TM66 *Creating a circular economy in the lighting industry,* available from www.cibse.org/knowledge.

TM66 Example Question

			0 S	elect evidence p 1	er action towards 2	circular econom 3	y 4		
	Circular economy effect	Feature	No evidence	Some positive evidence	Positive evidence	Excellent positive evidence	Outstanding evidence	Score	Evidence in support of choice
		Ease of upgrading light	Impossible	Risk of damage	Possible	Easy/ Zhaga Style			
		source	0	0	0	0		-1	
Allows products to be upgraded,	to be upgraded,	Effect of light source	Degraded	High risk of reduction	Maintained but difficult	Maintained and easy			
	keeping existing products in use rather than	upgrade on thermal performance	0	0	0	0		-1	
Upgradability	requiring new products with high percentages	Free of confirming second of	Impossible	Termination & configure	Plug & configure	Plug & play			
	of virgin feedstock to be procured	including plug sockets, driver settings	0	0	0	0		-1	
		Availability of upgrade light	Not available	Available, but product specific	Available, covers multiple products	Commonly available			
		sources	0	0	0	0		-1	

TM66

Categories of Evaluation & Key Elements

Product Design

- Adaptability
- Upgradeability
- Use in second life
- Modularity
- Durability
- Material/BOM simplification vs. "typical"
- Assembly techniques
- Design for remanufacture
- Controls
 Obsolescence
- Performance
 Certifications
- Circularity Design
 Competence

Manufacturing

- Manufacturing Complexity Weighting
- Supply Chain Engagement
- In-house closed loop manufacturing
- Social Responsibility

Materials

- Reduction of virgin materials
- Plastics identified for recyclability
- Biodegradable materials
- Innovative sustainable
 materials
- Biodegradable
 packaging

Ecosystem for Product Reuse

- Systems & Resources
- Reusable packaging
- On-Site upgradability
- Accurate photometry accessible
- Component supplier commitment
- Warranty
- Manufacture
 Competence & buy-in

Product Circularity Data Sheet

PCDS PRODUCT CIRCULARITY DATA SHEET LUXEMBOURG

- Proposed as the official standard for communicating data on the circular economy properties of products in concert with the ISO323 Circular Economy Technical Committee
- Not specific to lighting products
- Each product gets assessed by answering approximately 100 true-false statements in 4 sections:
 - Composition
 - Designed for Better Use
 - Designed for Disassembly
 - Designed for Reuse
- Not a rating system in that there is no resultant score
- Responses captured in a standardized IT exchange protocol that can be easily shared across platforms, including ones that can assign a score

Creating a digital circularity fingerprint for products

Instructive & likely will become part of EU circularity directive compliance

Declare Labels & Health Product Declarations (HPDs)

AIA Materials Pledge

support **HUMAN HEALTH** by preferring products that support and foster life throughout their life cycles and seek to eliminate the use of hazardous substances.

support a **CIRCULAR ECONOMY** by reusing and improving buildings and by designing for resiliency, adaptability, disassembly, and reuse, aspiring to a zero-waste goal for global construction activities.

support **CLIMATE HEALTH** by preferring products that reduce carbon emissions and ultimately sequester more carbon than emitted.

support **ECOSYSTEM HEALTH** by preferring products that support and regenerate the natural air, water, and biological cycles of life through thoughtful supply chain management and restorative company practices

support **SOCIAL HEALTH & EQUITY** by preferring products from manufacturers that secure human rights in their own operations and in their supply chains, positively impacting their workers and the communities where they operate

Health Product Declaration

hpdc

- Open Industry Standard
- Every chemical in every component on the BOM disclosed to either 100 or 1000 ppm
- Optional third-party verification

DECLARE Product Labeling

- Ingredients disclosed to the most stringent 100 ppm level
- Red List chemicals highlighted in dark orange
- Emerging chemicals of concern highlighted in light orange
- Small Electronics Exemption
- Additional mandatory information:
 - Final assembly locations
 - Life expectancy
 - End of life options including recyclable content %
- Optional:
 - Embodied Carbon
 - Third Party Verification
- Considerably more expensive to obtain/maintain vs. HPDs including annual renewal

Product Name Manufacturer

Final Assembly: First City, State, Country; Second City, State, Country; Third City, State, Country Life Expectancy: 50 Years Embodied Carbon: # kg CO₂-eq = Declared Unit: # m² End of Life Options: Recyclable (95%), Landfill (5%), Take Back Program (Program Name/Location)

Ingredients:

Your First Component: Sustainably Sourced Ingredient; LBC Red List Ingredient'; Your Second Component: LBC Watch List Priority for Inclusion, Non-Toxic Ingredient; Undisclosed (<0.1%)²

¹LBC Temp Exception RL-009 Formaldehyde ²LBC Temp Exception RL-004var.a Proprietary Ingredients

Living Building Challenge Criteria: Compliant

I-13 Red List: LBC Red List Free LBC Red List Approved Declared

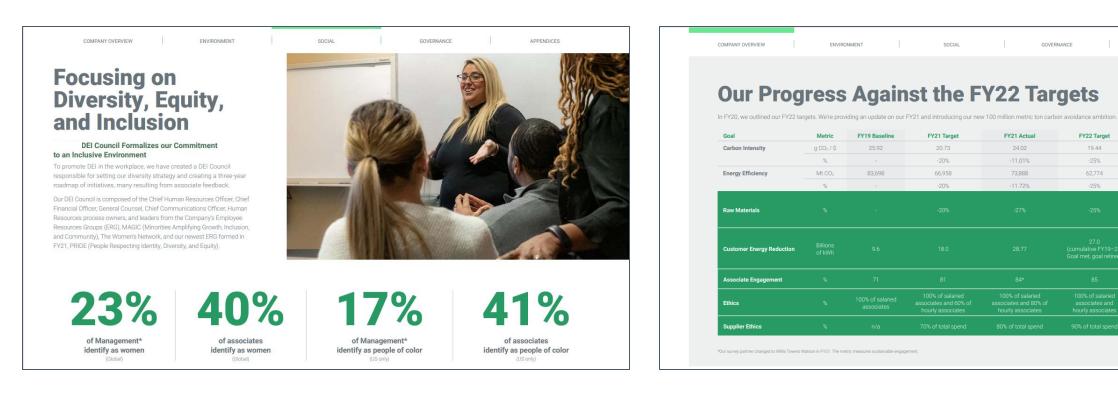

% Disclosed: 99.9% at 100ppm VOC Content: # g/L

I-10 Interior Performance: CDPH Standard Method v1.2-2017 I-14 Responsible Sourcing: Product Available with FSC Chain of Custody
